Cutting funding to sexual and reproductive health services will not only have a devastating effect on people's lives, but is a false economy and will result in greater cost to the public further down the line.

As a direct consequence of budget cuts, the additional cost to the public of unintended pregnancies and sexually transmitted infections could be as much as £8.66 billion over the next five years.

Additional unintended pregnancies as a result of cuts could cost an extra £1.77 billion in education costs by 2020.

Reduced services could cause almost 20,000 extra cases of gonorrhoea. We have already seen an outbreak of gonorrhoea that is resistant to antibiotic treatment, and expect to see more.

If the current reduced spending becomes the norm over the next five years, every £1 that is cut by the Government could cost the country as much as £86 down the line.

Additional unintended pregnancies could cost the UK an extra £8.3 billion over the next five years.

Teenage pregnancy rates could go back to 2003 levels, undoing more than a decade of hard work. The UK still has the highest rate in western Europe.
